Galaxy Song - 2014 edition

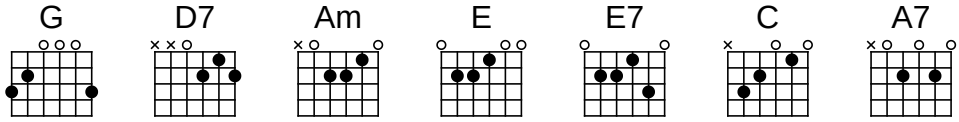
G D7

G *D7*
Just remember you're a tiny little person on a planet in a universe expanding and immense
Am *D7*
That life began evolving and dissolving and resolving
G *D7*
In the deep primordial oceans by the hydrothermal vents

G *E* *E7* *Am*
Our earth which had its birth almost 5 billion years ago from out of a collapsing cloud of gas
C *G* *E7* *A7* *D7* *G* *D7*
grew life which was quite new and eventually led to you in only 3.5 billion years or less

G
Deoxy-ribonucleic acid helps us replicate
D7
and randomly mutate from day to day
Am
we left the seas and climbed the trees
D7 *G*
and watched as our biologies continued to evolve through DNA

G
We're 98.9% the same as chimpanzees
E *Am*
whose trees we left 3 million years ago
C *G* *E7* *A7* *D7* *G*
to wander swapping genes out of Africa which means we're related to everyone we know

G *D7*
Standing on a planet which is spinning round a star one of just 1 billion trillion sons
Am *D7* *Am* *D7* *G*
In a universe that's 90 billion light years side to side wondering where the heck it all came from


G *E* *E7* *Am*
You've a tiny little blink of life to try and understand what on earth is really going on
C *G* *E7* *A7* *D7* *G* *D7 G*
In biology and chemistry which made you you and made me me but don't ask me I only sang this song
